PATRIK SOLUTIONS AI

The AI Income Starter Kit

A simple, practical guide to using AI to earn more — whether you're in Accra, abroad, or anywhere in between.

By Patrik Barfi · AIGP-certified AI Engineer & Instructor

ai.patriksolutions.com · Free companion to the AI Fundamentals course

Welcome — let's make AI pay off

AI isn't magic, and it isn't just hype. It's the most powerful *leverage* tool of our time: it lets one person deliver work that used to take a team, and do it faster. That's the whole game. **You get paid when you use AI to deliver real value more quickly or more affordably than before.**

This kit gives you the shortest honest path from "I keep hearing about AI" to "I'm actually using it to earn." No coding. No big budget. Just one skill, the right tools, and a plan.

> ***One promise up front:*** *there are no get-rich-quick tricks in here. What you'll find is a real, repeatable way to turn AI skills into income. The effort is yours — this just points it in the right direction.*

What AI can realistically do for your income

There are three honest ways AI puts money in your pocket:

1. **Earn on the side** — offer an AI-powered service (writing, design, admin, social media) as a freelancer.
2. **Earn more at work** — get more done in less time, take on bigger responsibilities, and become the person who "gets AI."
3. **Earn in your own business** — automate the slow, repetitive tasks so you can serve more customers without more hours.

You don't need all three. Pick the one that fits your life right now.

The 5 highest-value skills to start with

Don't try to learn everything. Choose **one** of these, get good, then expand.

Skill	What you'd offer	Main tool
Writing & editing	Blogs, product descriptions, newsletters, profiles	ChatGPT / Claude
Social media	Captions, content calendars, short-video scripts	ChatGPT + Canva
Design	Flyers, logos, ads, product images	Canva AI
Admin / VA	Scheduling, inbox, research, data entry	ChatGPT + Copilot
Customer support	FAQs, chat replies, help docs for small shops	ChatGPT

How to choose: match it to what you already understand. Good with words? Writing. Organised? Admin. Visual? Design.

The one prompt framework to remember: R-T-C-F-T

The difference between a useless AI answer and a brilliant one is almost always the prompt. Use this every time:

R — Role: tell the AI who to be. "*You are an experienced social media manager.*"

T — Task: say exactly what you want. "*Write 5 Instagram captions.*"

C — Context: give the details. "*For a small bakery in Accra, friendly, local.*"

F — Format: describe the output. "*Each under 150 characters, with 3 hashtags.*"

T — Tone: set the voice. "*Warm and a little playful.*"

Then **refine**: "make #2 shorter," "add a call to action." Great results come from the back-and-forth, not the first try.

Your free tool starter pack

- **ChatGPT, Claude, or Google Gemini** — your main assistant (free tiers are plenty to start)
- **Canva** — design flyers, posts and simple logos (built-in AI)
- **Microsoft Copilot** — handy inside Word, Excel, PowerPoint

Start with **one** chat assistant. Learn it well before adding anything else.

Your 7-day action plan

Day	Do this
1	Pick ONE skill from the table and one AI assistant. Create a free account.
2	Practice the R-T-C-F-T framework on 5 real tasks.
3	Create 3 sample pieces (your portfolio) and save them in a free Canva page or Google Doc.
4	Write a one-line offer: "I help [who] with [what], delivered [how fast]."
5	List 10 people/businesses who need it (local + online).
6	Reach out to 5 of them. Offer to redo one thing so they see the quality.
7	Deliver one job well. Ask for feedback and a referral.

Common mistakes to avoid

- **Sending raw AI output.** Always review, fact-check, and add your judgement — that's what people pay for.
- **Learning everything at once.** One skill, done well, beats five done badly.
- **Charging by the hour** when AI makes you fast. Charge for the result and the value.
- **Giving up after one "no."** Every strong freelancer heard a lot of them first.

Your next step

This kit is the map. The free **AI Fundamentals** course is the guided walk-through — from zero to confidently using AI, step by step, with an instructor.
